Abstract

The new abstract filed June 10, 2005 is hereby acknowledged and has been found acceptable.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Art Unit: 1755

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-5 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 9-10 of U.S. Patent No. 6,716,788. Although the conflicting claims are not identical, they are not patentably distinct from each other because they differ from one another only in the scope of coverage being sought. For example, the patented process recites and "alkaline metal compound" whereas the instant claims recite an "alkaline metal oxide". However, the "compound" of the patent is defined by the specification to include an oxide. The patented claims further recite catalyst present in an amount of at most 15ppm. The instant claims are silent regarding the amount, and thus are broader than the species for which a patent has already been granted. A generic claim is always obvious over a patented species. Regarding the amount of ultra-high molecular weight compounds in the reaction product, it is considered that this limitation is inherent to operation with the instantly claimed catalyst composition. In this field of technology, the catalysts are tailored specifically to produce products having certain characteristics, or certain changes in the reaction itself such as induction periods. Accordingly, absent some convincing showing of evidence to the contrary, it is more than reasonable to conclude that the catalyst composition itself is responsible for the characteristics of the reaction product.

Response to Amendment

The terminal disclaimer filed June 10, 2005 is hereby acknowledged. It has been disapproved, however, because it was not signed by an attorney of record in this application. Accordingly, the obviousness-type double patenting rejection stands.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
